

## Panduan

1. Buka <https://script.google.com/>
2. Buat project baru

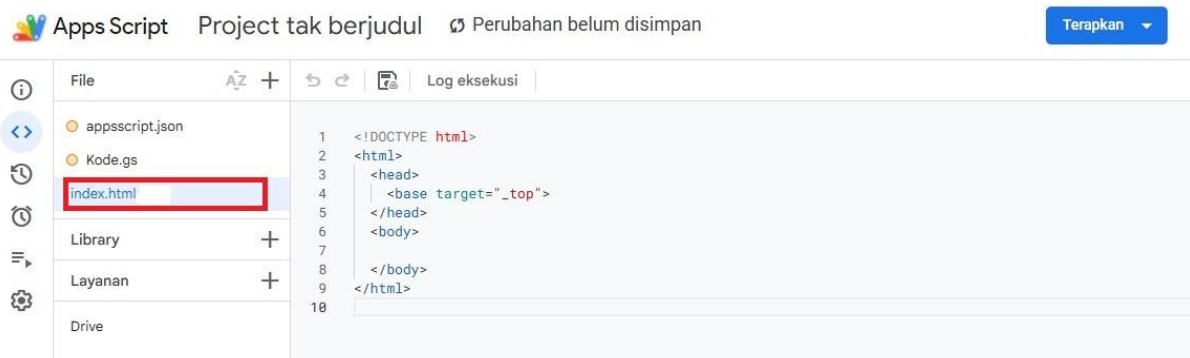

3. Ganti nama project kamu dan hapus semua kode

4. Buka pengaturan dan centang "Tampilkan file manifes "appsscript.json" di editor"

5. Kembali ke menu Editor dan masukkan kode pada "appsscript.json"

10. Tekan tombol terapkan/deploy dan pilih “Deployment baru”

11. Ubah deskripsi (opsional) dan ubah izin akses ke “siapa saja/anyone” dan terapkan.

**Deployment baru**

| Pilih jenis  | Konfigurasi                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
